Create A Video in iMovie

To Remove Unwanted Video
**Cut:** Removes the frames you selected.
**Crop:** Keeps the frames you selected.
**Split:** Breaks a clip into two separate clips.
Drag + hold the Command key to overwrite other clips in the timeline.

Drag pointer/cursor in the Timeline Viewer
**Center of Clip:** Dragged clip will move.
**Edge of Clip:** The clip’s length will change.
Create A Video in iMovie

**Extract the Audio Track to modify the Audio Track**
Advanced > Extract Audio

**Superimpose**: Use two audio tracks with clips in both of them.

**Modify a Clip’s Volume**
Select View>Show Clip Volume Levels. A line appears within the clip to raise or lower sound (i.e. fade in/out)

**Volume Adjustments to More than One Clip**: Shift-click on the audio clips, and adjust the volume slider.

**Out-of-Sync Video/Audio can result from Transition Effects**
Select Advanced > Lock Audio Clip at Playhead to lock the audio to the video, not to the timeline.
To unlock, choose Advanced > Unlock Audio Clip.
Drag icon from the Pane onto the clip.

**Audio Pane:** Voice-overs and Sound Effects

**Titles Pane:** Multiple lines can be re-sequenced by dragging the left-edge (gray) of a pair up or down in the list.

**Transition Pane:** Highlight transition’s icon and press the spacebar to watch the effect. Shift-click the two clips in question and press play.

**Effects Pane:**
Modifiable in-point/out-point for the effects. If you apply the effect permanently, it will enable you to apply additional effects.

Converting to Email, Web, QuickTime or DVD
File > Share

The time factor for compression is based on:
- Codec choice
- Movie’s length
- Amount of motion on screen
- Speed of the Mac

NOTE: Only the QuickTime option allows you to customize the settings. QuickTime>Expert Settings>Share
